

## VMWare View Client Installation Instructions

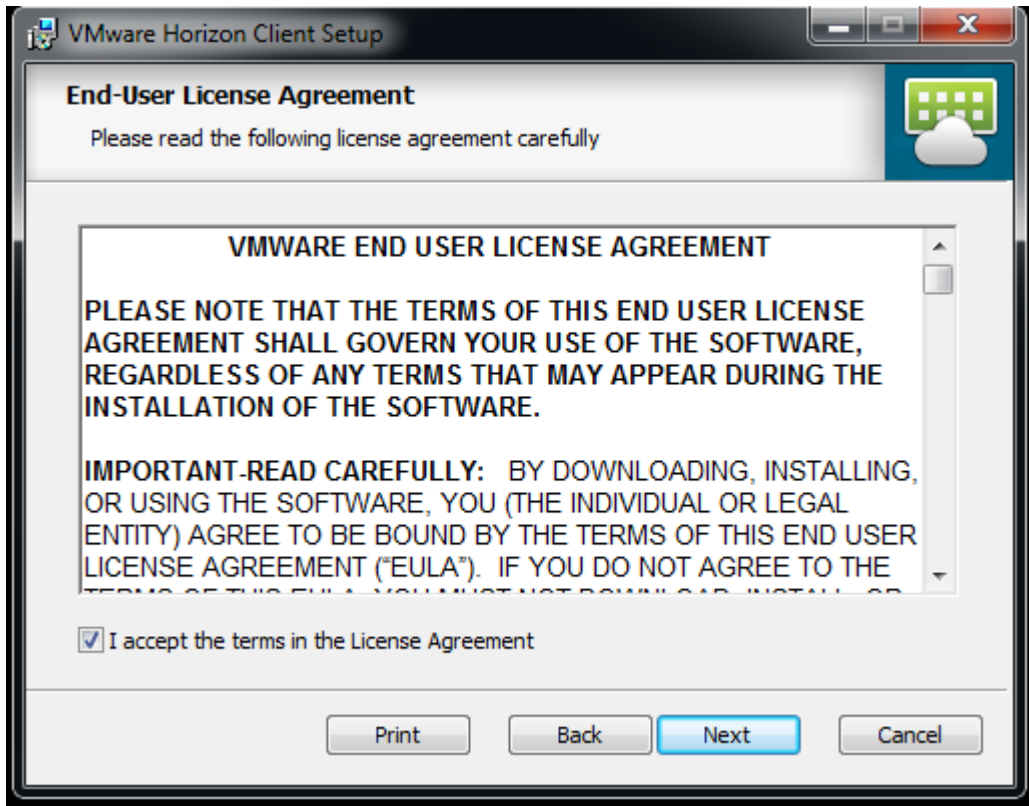

### Step 1 – Install the VMWare Horizon View Client

Obtain either the 32-bit VMWare View client [here](#), or the 64-bit version [here](#). (Most uOttawa PCs operate in 64-bit mode). Once the client has been downloaded, double-click the file to begin the installation procedure.

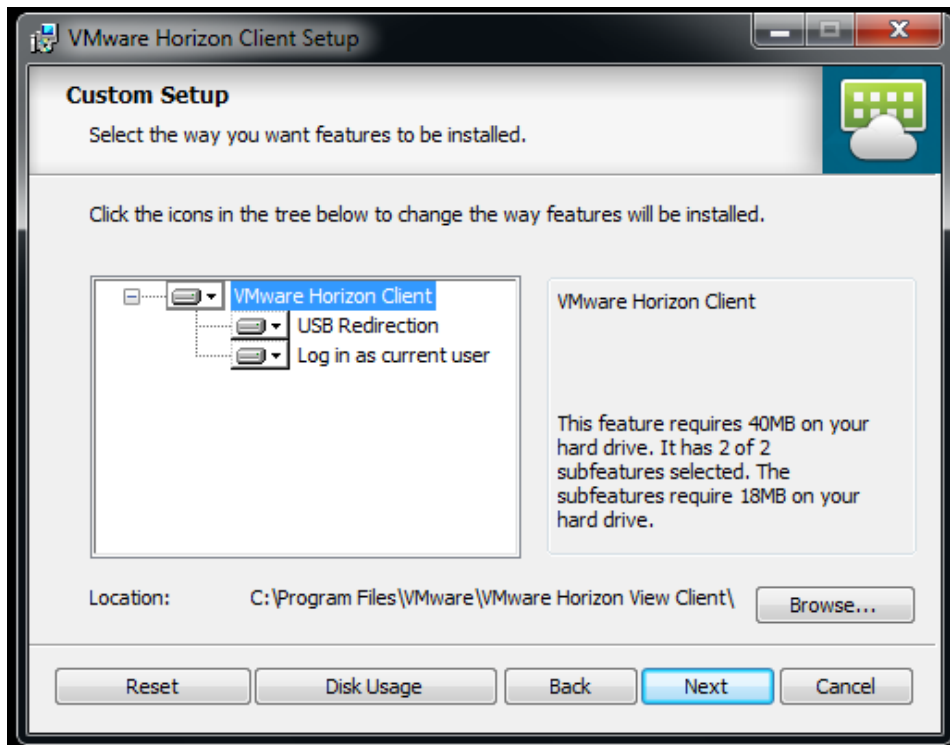

On the **VMware Horizon Client Setup** screen, select **Next**.

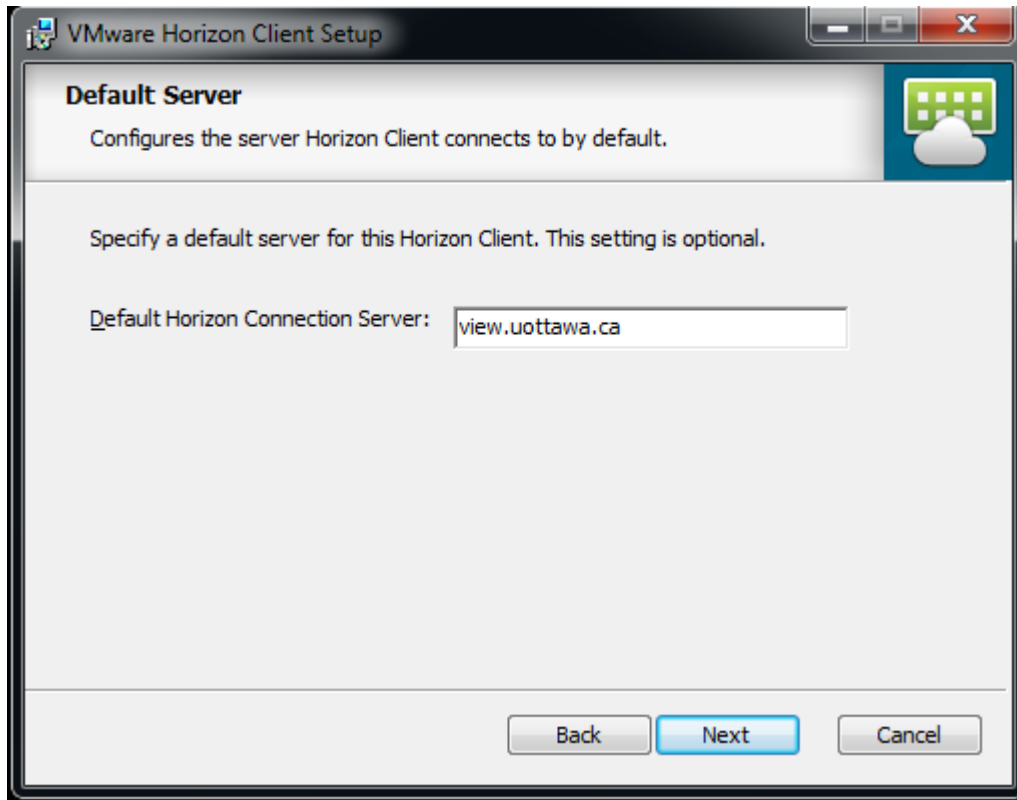

Check the **"I accept the terms in the License Agreement"** box and click **Next**.

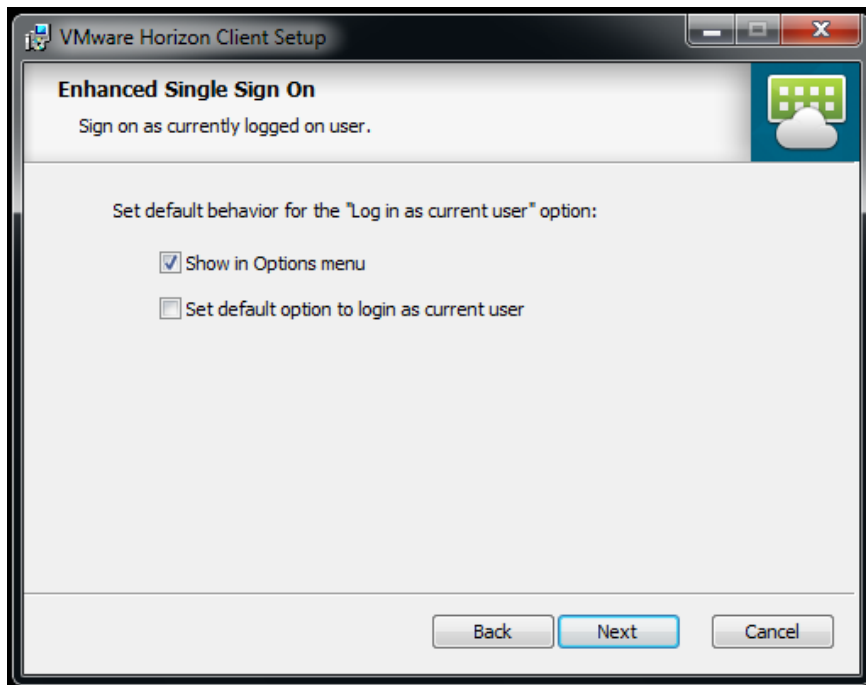

In the **Custom Setup** window, click **Next**.

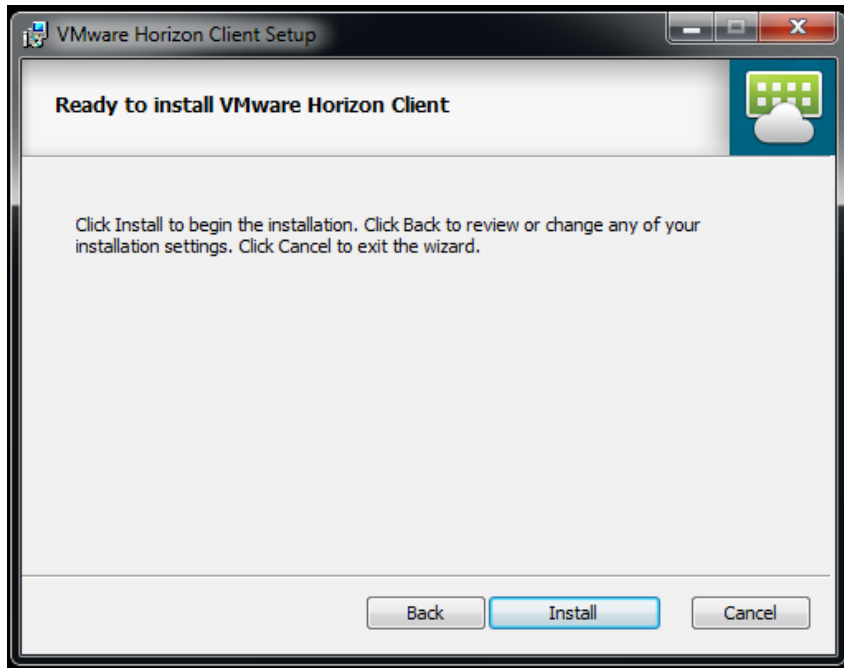

On the **Default Server** window, type **view.uottawa.ca** and click **Next**.

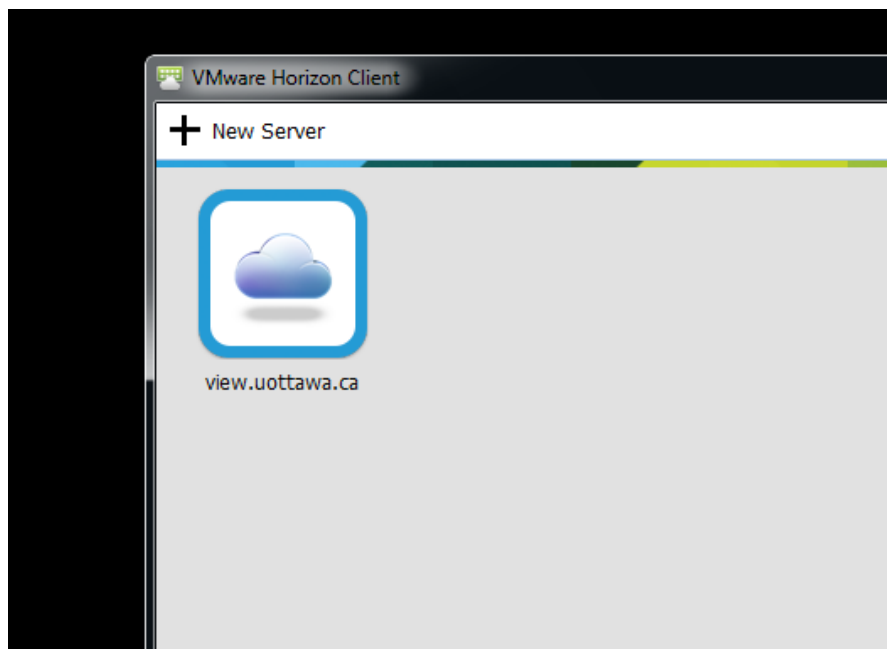

On the **Enhanced Single Sign On** screen, leave the default selections and click **Next** twice.

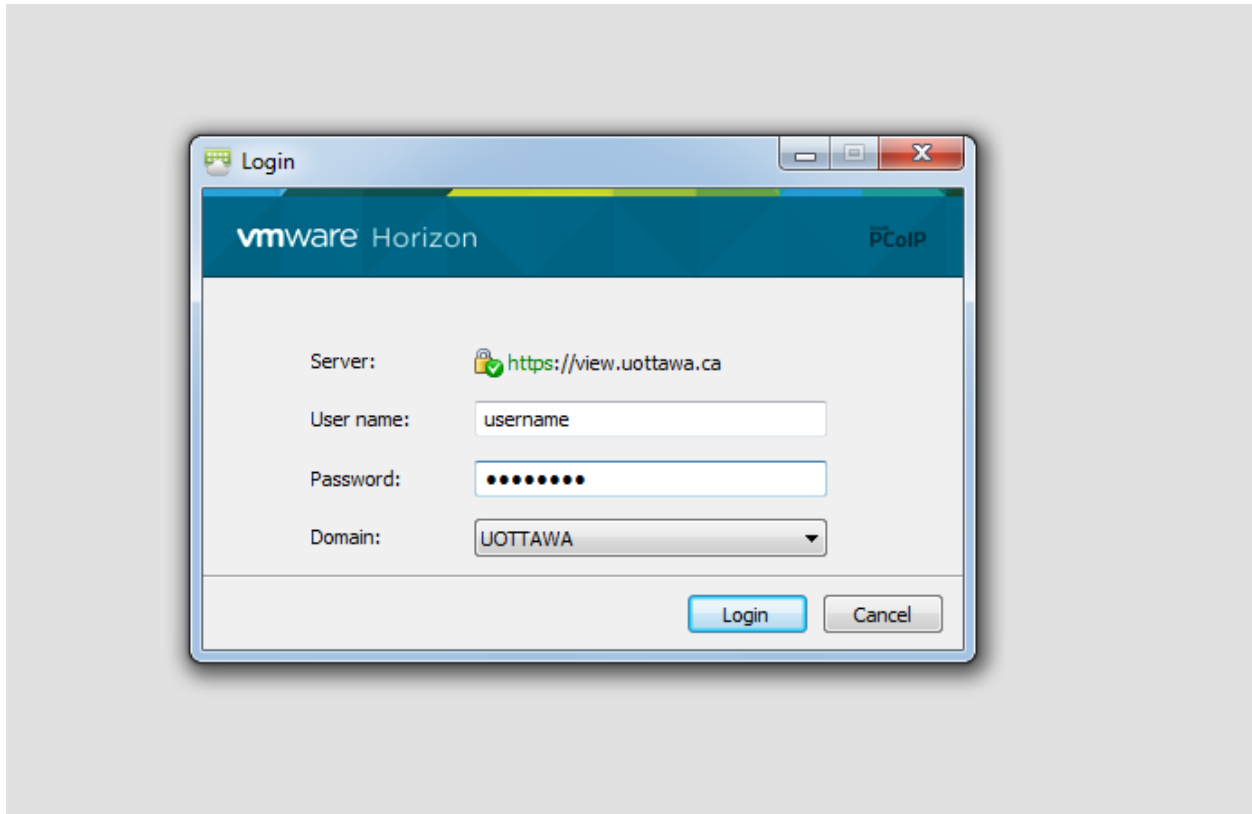

Click **Install** on the **Ready to install VMware Horizon Client** window.

Once the installation is completed, click **Finish** and select **Yes** when asked to reboot the PC. A new icon will appear on the Desktop called **VMware View Client**. Double click this icon to bring up the following window. Double-click **view.uottawa.ca**.

Enter your AD/Exchange (email) credentials and modify the **Domain** field to **UOTTAWA**.

You will now be presented with a window containing the VDI pools you have rights to. Right click a pool and select **Create Shortcut** to create a desktop shortcut that will allow you to rapidly launch this pool in the future.
